1.0 PURPOSE
1.1 The Atlanta Independent School System (hereinafter, “Atlanta Public Schools” or “APS”) invites qualified vendors to submit a proposal to provide a turnkey solution to design implement, and provide ongoing maintenance/support for a network access control (NAC) system for Atlanta Public Schools.

1.2 In recent years, the volume and diversity of mobile devices (BYOD) on APS network continue to rise, and so does the need to ensure that every device connecting to the network (wired or wirelessly) is safe. Cybercriminals leverage vulnerable endpoints as back doors to the network and according to Gartner "by 2017, the focus of mobile breaches will shift to tablets and smartphones from workstations.” As the attack surface of the network continues to multiply with each new device introduced into the network, APS believes that NAC is essential to securing its assets and critical infrastructure. APS expects that the proposed NAC solution will provide complete visibility and control over whom and what is accessing its wired and wireless networks at all times. APS expects that vendors responding to this RFP will describe how they can fulfill the requirements of this RFP.

1.3 In using this method for solicitation, we are requesting your best effort in seeking the best value for our requirements. To be eligible for consideration, sealed proposals shall be presented in accordance with the instructions of this solicitation and within the timeframe specified. It shall be the responsibility of the selected Offeror to meet all specifications and guidelines set forth herein. Atlanta Public Schools, at its discretion, determines the criteria and process whereby proposals are evaluated and awarded. No damages shall be recoverable by any challenger as a result of these determinations or decisions by Atlanta Public Schools.

2.0 CURRENT SITUATION
2.1 Atlanta Public Schools (APS) is one of the largest Districts in Georgia, serving more than 50,000 students at 106 learning sites throughout Atlanta, including two single gender campuses and 17 charter schools. APS is organized into nine high school clusters with distinct feeder patterns. The cluster model allows all students from a particular elementary school to matriculate at the same middle school, and students enrolled at that middle school to attend the same high school. The cluster model also provides greater access to a more equitable distribution of resources and multiple layers of support

2.2 APS presently utilizes two Internet Service Providers with a total bandwidth of 11G, and a WAN solution hosted by Education Networks of America (ENA). The network infrastructure is a hub and spoke design with the APS Center for Learning and Leadership (CLL) serving as the network hub. The spokes are schools that are clustered into two (2) separate 5 Gigabit speed fiber backbones terminating back to the CLL core on two (2) HP 12910-AC switches. At this time APS has twenty seven (27) school locations that utilize one (1) Gigabit speed connections to the WAN while the remaining sites utilize one hundred (100) Megabyte speed connections.

2.3 APS school sites are currently equipped with campus-wide local area network terminating into a HP 5500-24G-SFP-HI switch inside the main distribution frame (MDF) which connects to each intermediate distribution frame (IDF) closet with an individual 1 Gigabit speed fiber connection. Each classroom is wired for voice, data and video via a single (1) HP 100/1000 8 port HP 1920-8G switch which connects back to the MDF or IDF.

2.4 The district’s wireless network consists of Xirrus arrays but are currently being upgraded to the Cisco Meraki MR32, which is a dual-band enterprise class 802.11ac cloud-managed access point. The new design and implementation is being built for seamless roaming, coverage and capacity. There will be one access point in every classroom and enough to support all areas where instruction may occur.

2.5 Network connections to district assets include approximately:
   - 3,500 wireless access points,
