Next Steps

Facilities Master Plan Goals

The planning for this project is guided by these goals:

To equitably create innovative, sustainable, flexible, and efficient environments.

To equitably provide quality schools that align facility and academic objectives to strengthen communities.

To equitably distribute instructional space among facilities.

To equitably align property use, disposition, and acquisition with APS values and priorities while exploring alternative opportunities for the usage of facilities.

Guardrails: Guiding Themes

BASELINE

EQUITY

FLEXIBILITY

Methodology - Equitable School

How School Capacity is Calculated:

The total number of Instructional Units remaining after excluding the non-core classrooms, Equity Allocation (Psychological and Social support), and Gifted Programs multiplied by the number of students per classroom. The number of students per classroom is determined using the Funding Level numbers used for each respective grade level.

This result is then compared to the Current Year Enrollment (FTE-1) to determine whether a school is Over Capacity, Approaching Capacity, or Under Capacity

Note: Capacity for Charter Schools is set by the specific charter agreement with APS

Total Instructional Spaces

Note: # Core Classrooms assumes spaces are used as originally intended/designed

X

# of Students per Classroom (SSF)	
Grade Level	Funding Level
K-3	21
4-5	23
6-8	24
9-12	25

=

Note: SSF – number students was done by prorating distribution by grade.

Vs.

Methodology – Site

How Site Capacity is Calculated:

The total acreage guideline is calculated by adding physical education/play space, parking, and building footprint with a net/gross factor of 50% to accommodate circulation between each space. This result is then compared to the Existing Site Acreage to determine whether a school site is under-sized.

Note: Site Capacity for Charter Schools is set by the specific charter agreement with APS

Working Premises

School Capacity Planning

The facilities will be organized around Elementary School attendance zones. Middle schools will be arranged by the sum of specific Elementary school attendance zones. High schools will be arranged based on the sum of specific Middle school attendance zones. Rezoning cluster boundaries is not outside of the realm of possibility. However, it has not been identified as a priority for the Facilities Master Plan.

The Policy of “Administrative Transfers” will remain, but the facilities will be planned on the Demographic count of students within the attendance zone. Administrative transfers will be limited to current or planned permanent space.

Surplus Property

School sites will be identified for future sale if they are well below site standards, are within close distance of an existing school (½ mile for elementary schools) and/or not supported by the population trends for the year 2040. Sites may be exempted if large enough to house a future Elementary School site, or if designated for a specific school support use. All sites identified for future sale will be appraised and recommended to the Board for their consideration before site specific solicitation of community and private developers.

Community Uses or Functions to be Considered in the Schools

Community uses will be defined on a site by site basis. Strategic alliances are sought to provide facilities for programs such as:

- Parks and Recreation Sites
- Libraries
- Pre-K
- Other programs as identified by the community

Transportation

Atlanta Public Schools is studying strategies for how to address the location and transportation requirements of Special Needs Students.

APS Policies & GA Law

Administrative Transfers

Georgia Law

Georgia's Public School Choice Law (Intradistrict Transfer), allows city of Atlanta residents the option to apply to attend a public school outside of their zoned school area, if space is available. (O.C.G.A. § 20-2-2131 also known as House Bill 251).

APS Policies

Residents interested in attending an APS school, but **live outside of the city of Atlanta**, may attend if space is available, and pay non-resident tuition. APS offers two types of School Choice transfers:

General Administrative Transfers – permits students to attend an out-of-zone school **until the highest grade of school** (as allowable by Cohort aging).

Georgia Special Needs Scholarship Transfers – permits eligible special education students to request a transfer to another APS school on the basis of special needs.

*(Source: APS Website: Student Transfer Options
<https://www.atlantapublicschools.us/transfers>)*

JBCCA-R(2) – Administrative Transfers

Schools at 90% or above of the facility's planning capacity based upon the anticipated future enrollment are ineligible to accept school choice transfers for the following school year. If enrollment growth projections show that a school will reach or exceed 90% capacity within any school year in which a transfer is valid, that school is ineligible to accept school choice transfers. Schools below 90% of the facility's planning capacity may be ineligible to accept transfers based on the number of teachers allocated to the school and the state class size maximums.

	76,397	9,413	0.12	0.21

Student yields are lower overall in the forecast period as compared to current yields based on the assumptions that new housing growth will generally be:

- 1. in higher density formats than what typically exists (per Atlanta City Design)*
- 2. at higher price points, which typically yields fewer APS students*
- 3. occupied by households with fewer student-age children (per current demographic trends)*

- By Location: District, Cluster, School

Question and Answer

Next Steps

Key Drivers / Premises

- Birth to Kindergarten capture ratio
 - Drives the amount of students that were born 5 years prior that are enrolled in APS students. Each school is different. This is the main portion that drives the beginning of a cohort
- Cohort Survival Ratio
 - Amount of students retained once they are in the system. Used for projecting the subsequent grades.
- Transition years
 - Some schools have kids that move out of the zoned school while others have more students join in transition years. There is a spike or a decline in enrollment during these years.
- Charter Schools
 - Assumes the approved enrollment capacity remains in place
 - Assumes Private school capacity remains stable in next 5, 10 years
- Out of Zone – Administrative Transfers
- Real Estate developments
 - Enrollment growth due to new developments coming online that is not captured in survival ratio.

Proposed Agenda – Community 3

Introduction and Scope

Previous Work:

- Goals
- Guardrails to Calculate School Capacity
- Current Capacity
- Enrollment Forecast and Methodology

Student Enrollment Projections:

- By Time: 5 and 10 years
- By Location: District, Cluster, School

➤ Question and Answer

Next Steps

Objectives

1

Review Previous Work

2

Present the Enrollment
Projections (5 & 10 years
out): from District to School

3

Questions & Answers
Next Steps

Question & Answer

Dobbs ES

Feedback

Is there anything you wish to know or understand better about the Enrollment Projections?

Is there anything you wish to know or understand better about the Future Capacity of the Schools, based on Enrollment 5 and 10 years out?
