Final Clean in Area F

Community Interaction

Safety Sector

From the start of the project, workers on the APS Harper Archer project understand the importance of safe community interaction.

- All workers understand that there are active community members and to always be respectful of potential visitors.
- At the end of everyday, all workers know to lock up all equipment and tools inside the building.
- All doors and gates to the school will be locked at all times with signage prohibiting non-construction personnel from entering the jobsite without permission.
