Installation of Colored Glass

Distracted Driving

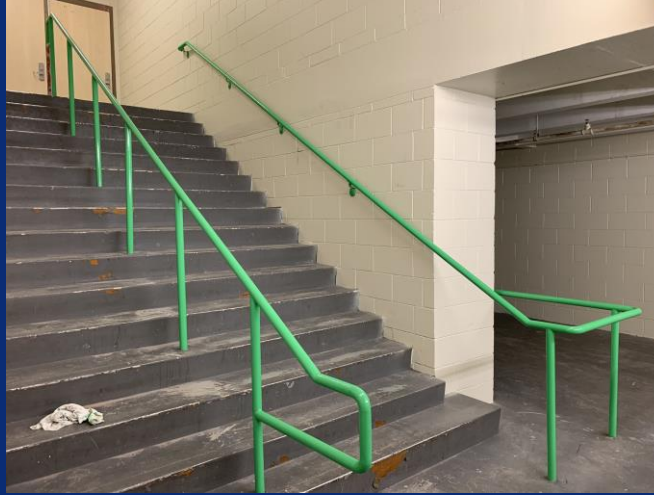

From the start of the project, workers on the APS Harper Archer project understand the importance of driving awareness.

Safety Sector

- All workers know that there are three main types of distracted driving: Visually, Manually, and Cognitively.
- 80% of all car crashes and 65% of near-misses involved a form of distraction.
- Everyone knows that reaction time is delayed for a driver on their cell phone as much as it is for a driver who is impaired.
- Studies show that drivers who text and drive focus their attention away from the road for an average of 4.6 seconds. At 55 mph, this is equivalent to driving the length of a football field.
