

WHAT'S HAPPENING IN WELLNESS

October 2023

FALL INTO WELLNESS

October brings a season of cooler weather for cozy layers, crispy colors, and awareness to our physical and mental health. Breast Cancer Awareness month is recognized this month so we all, yes, **women and men**, must be aware of their medical predisposition and take necessary precautions to be screened. If you are at the age of 40 or have a family history of breast cancer, talk to your doctor or health care provider about when to begin screening for breast cancer. You are also able to receive incentives through your insurance for screenings.

October 10th is Mental Health Day! The theme this year is '**Mental health is a universal human right.**' It is a basic human right for all people and it is vital to overall health and wellbeing. Find time on this day to educate yourself on strategies, support, and resources needed to

improve your mental health. Take advantage of a few of the supports APS offers such as [The Mindful Adult Program](#), [Deer Oaks EAP Services](#), and [Sharecare](#).

ICYMI

Our newest partner, Do The Most Synergistic Wellness, has begun their classes around teaching adults about general nutrition concepts and the impacts that nutrition choices have on the physical body as well as the mind.

Session 1: Generational Health

Often, we discuss generational “wealth,” but what about generational health? This session focuses on things that impact health but with a focus on

nutrition. We discuss major diseases and how food can be a contributing factor in illness and/or in the healing cycle. Additionally, we cover the importance of making health a priority.

Session 2: Soothe My Mood

This class delves into how food impacts everyone’s mood. This discussion breaks down sugar, caffeine, hormones, neurotoxins, eating cycles, and how they all relate to mood. We offer lifestyle or habit changes that can be implemented to help regulate mood.

Don’t miss the next class! Smart Cart Workshop: This interactive session offers a virtual “tour” of a traditional grocery store, educates participants on food labels, and teaches how to shop the most nutrient dense areas of the store. There is a pre-class activity in which participants fill out their regular shopping list, and then we do a line item “shop swap” for what the healthier option could be. This gives participants a very applicable way to build a “smart cart” every time they shop.
